

Welcome to Anaconda Training

Learning with Anaconda

Anaconda is the leading open data science platform and an ideal environment for interactive, hands-on learning. All training courses offered by Continuum feature interactive curriculum delivered live in an environment built on Anaconda. We use Anaconda to teach Anaconda.

Set-up

To get set-up for running the interactive course material, start by looking in the `setup/` directory for instructions on how to set up your system for running the course:

```
setup/SETUP_LINUX_AND_MAC.txt  
setup/SETUP_WINDOWS.txt
```

Open these text files with any text editor or word processor. Follow the instructions there-in. You will use them to install the Anaconda Distribution and create an isolated python environment for use with the course materials. This install and set-up will not interfere with your system python.

Getting Started

Once you have Anaconda installed and your environment created, launch the course introduction notebook by running the following command in your system shell (Terminal or Command Prompt):

```
jupyter notebook Course_Introduction.ipynb
```
